

Vancouver Infrastructure Service Request Hotspot Analysis 2023 – 2025 | City of Vancouver Open Data

This map presents a spatial hotspot analysis of infrastructure-related 311 service requests submitted to the City of Vancouver between 2023 and 2025.

Kernel Density Estimation (KDE) was applied to 90,877 georeferenced service requests across four infrastructure departments: Streets Operations, Urban Forestry, Traffic & Electrical Operations, and Waterworks; to identify concentrations of maintenance demand across Vancouver's 22 local areas.

Darker areas indicate higher densities of service requests and represent priority zones for infrastructure maintenance planning.
